Definition of Landscape Architecture

IMLA follows the definition coined by ECLAS, the European Council of Landscape Architecture Schools:

'Landscape architecture as a field of professional activity, and an academic discipline, is concerned with the shaping of landscapes at various scales.

Core competences of landscape architecture centre on the process of intervention in landscapes to create new or revitalised places, by means of landscape planning, design and management, as well as by project implementation.'

Tuning Document, 2011

Planning and design in Europe and beyond:

- Broaden your horizon in international contexts
- Learn about different (planning) cultures
- Develop your self-confidence

Preparation for management functions:

- Organisational foresight, team building and leadership in projects
- Project and process management
- Public relations, communication and participation

Working efficiently in (interdisciplinary and intercultural) teams:

- Teamwork and interdisciplinarity, intercultural communication
- Time management and work flow
- Planning and design methods and international approaches

Creating ideas and solutions for landscapes throughout Europe:

- Current project tasks in different contexts
- Intensive studio work and landscape architecture research
- Application and development of digital technologies and tools
